3.0 SERVICES

We also do provide professional services to our clients. This professional services is our home grown service by our experience and certified engineer. Our professional services are;

a) **Security Posture Assessment** is a systematic approach to provide risk assessment to protect digital assets of business operations against cyber-attacks. The services helps to identify security loopholes and vulnerabilities in the business operation as well as ensuring the solutions and protective mechanism were implemented as intended. Our security posture assessment covers
   1. Internal / External Penetration testing
   2. Network Penetration Testing
   3. Web Penetration Testing
   4. Mobile Penetration Testing
   5. Host Compliance Assessment
   6. Wireless Security Assessment
   7. Database Security Configuration Review
   8. Source Code Review
   9. Network Device Configuration Review
   10. Social Engineering
   11. Security Policy Review

b) **Performance Testing Services** is a seamless integration of performance testing services at any stage of Software Development Life Cycle(SDLC). Our We will delivers high-end software testing services to manage software quality from
   1. Load testing - Evaluates software behavior under a specific expected load
   2. Stress Testing - Identifies the upper limits of software capacity
   3. Volume Testing - Evaluates software productivity under an increasing volume of stored and processed data
   4. Scalability Testing- Measures software capability under increased processing power and architecture changes
   5. Stability Testing - Determines the effect of configuration changes on the system's performance and behavior

c) **Cloud Web Application Firewall Services** is a cloud based WAF solution to reduce the security risks of your company's web applications. It is an intelligent, integrated and scalable solution to protect your business-critical web applications from malicious attacks, with no changes to your existing infrastructure.

d) **Network Forensic Services** offer a services to capture, recording, and analysis of network events in order to discover the source of security attacks or other problem incidents. We will find any problem related to network infrastructure and provide a recommendation to customer to mitigate the problem.

e) **HarkWist** offer a complete solution to design, analyse, optimize and troubleshoot your WiFi network. This services provides you a capacity and planning analysis of WiFi networks and visibility of users WiFi network. We use commercial hardware and software to provide a better analysis of your exisiting WiFi network.

f) **HarkNotify** is a SMS(text) application specifically designed for SMS alert and notifications for the enterprise network equipments. HarkNotify provide instant and concise SMS alerts to IT administrator in the events when there is crital alert in your network organization. SMS alerts is also a reliable notification because messaging apps like WhatsApp,Telegram and WeChat require a mobile data. IT administrator can turn off the internet on his or her mobile to save battery life or data cost. SMS uses the regular

mobile network and is not dependent on the internet or any other technical issues thus making IT administrator is reachable

4.0 VISION

To be a leading Network and Security company in Malaysia, providing the simply and reliable solution for our customers with an unmatched level of service.

5.0 MISSION

To deliver quality value added professional services and high levels of customer satisfaction for each business it conducts.
